Reviewer Comments:

1. There are some grammatical mistakes in the article that will need to be fixed before publications. [See attached]
2. There needs to be a more thoughtful discussion as to why certain parameters were chosen (i.e. Why choose 50 degrees celcius, why measure serum concentration 20 days out, is it due to the half life, why was there not a serial measurement of the Crizotinib level)
3. Conclusion needs to be reworded.
4. Are there any pictures, graphs or tables?
